Orbit Digital Roasters proposes a national coffee program for Northstar Cafe Group. We have 14 years of coffee experience and supply hotel groups, universities, and restaurant chains. We can provide 12,000 kilograms per month and can support seasonal menus and private-label packaging.

QUALITY AND EXPERIENCE

Our head roaster approves each blend and checks production batches for roast consistency. We can provide origin and importer details for most lots. The exact farm-level record varies by origin and may not be available for every shipment. We maintain customer tasting notes and can arrange a joint tasting workshop. Our three national references are available after an introductory call.

We assign a senior account director and customer care desk. The desk is available from 7 a.m. to 7 p.m. Central Time on weekdays. Standard questions are answered within one business day. We have handled seasonal demand increases for multiple hospitality customers.

DELIVERY AND COMMERCIAL OFFER

Annual estimate: $388,800 for 144,000 kilograms, or $2.70 per kilogram. Delivery to current locations is included; remote location fees are reviewed individually. Price is held for nine months and then adjusted at renewal. Payment terms are net 30. Custom packaging and a menu workshop are included.

We expect to complete onboarding within five weeks. Our account director will coordinate samples, order setup, and launch. Several teams support forecasting, production, and distribution. A detailed week-by-week plan and named delivery milestones can be prepared after contract award. We operate a national distribution network and typically maintain several weeks of inventory, though reserve quantities depend on origin and seasonal demand.

FOOD SAFETY AND CONTINUITY

Our primary roasting site has a documented food safety plan and annual external audit. We use batch codes on finished product and can trace shipments through our warehouse system. The proposal does not specify the audit standard, record-retention period, residue testing frequency, or target time for a mock recall. We can provide available certificates during onboarding.

We use multiple import partners and distribution centers. Our service team coordinates delivery changes with local carriers. The proposal does not define a specific backup carrier, a substitute approval workflow, or a written response time for supply disruption. We are open to setting service measures and continuity details during joint planning.
